INTRODUCTION

INTRODUCTION

Since our founding in 2006, YETI has strived to bring more people into the WILD by providing highly durable gear for any situation. We decided early on that product innovation would come from necessity and firsthand experience. Today, YETI products deliver exceptional performance and durability - whether on an excursion into the remote wilderness, at the beach, or just getting together with friends in the backyard.

No matter where our products are used, we are committed to the safety and quality standards that help protect our customers and the environment. This commitment is a partnership between YETI and our supply chain members, backed by the support of our internal teams and leadership.

This Restricted Substance List (RSL) Program provides clear and concise guidance to enable responsible product development and chemical management within our supply chain. This document specifies the chemical restrictions applicable to substances used in manufacturing YETI components, products, and packaging. In addition, it outlines the responsibilities of suppliers to YETI and identifies resources available for support.

All raw material, component, and finished good suppliers to YETI must meet the expectations detailed in the RSL Program. We expect suppliers to implement or maintain management processes to comply with these expectations and to communicate this information to internal teams and business partners.

YETI will ensure that this Program is updated annually or as needed.

We appreciate your partnership in supporting YETI's legacy of safe, high-performing, and durable goods for our consumers.

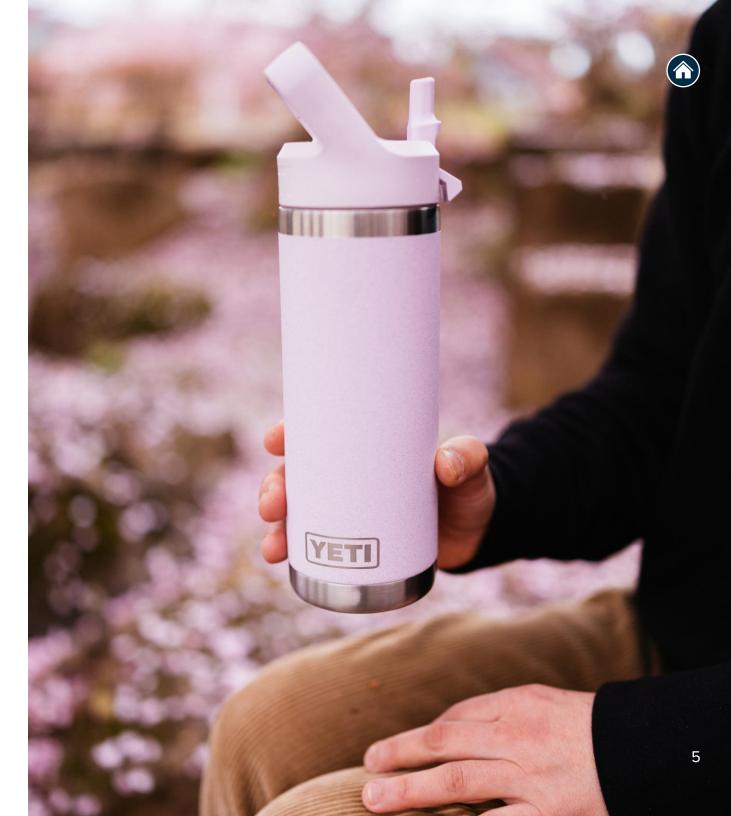

For information on YETI's Safer Chemistry goals and our broader Sustainability strategy, please visit yeti.com/wild.html

CONTACT INFORMATION

Please contact the YETI RSL team at RSL@yeti.com with any questions or issues.

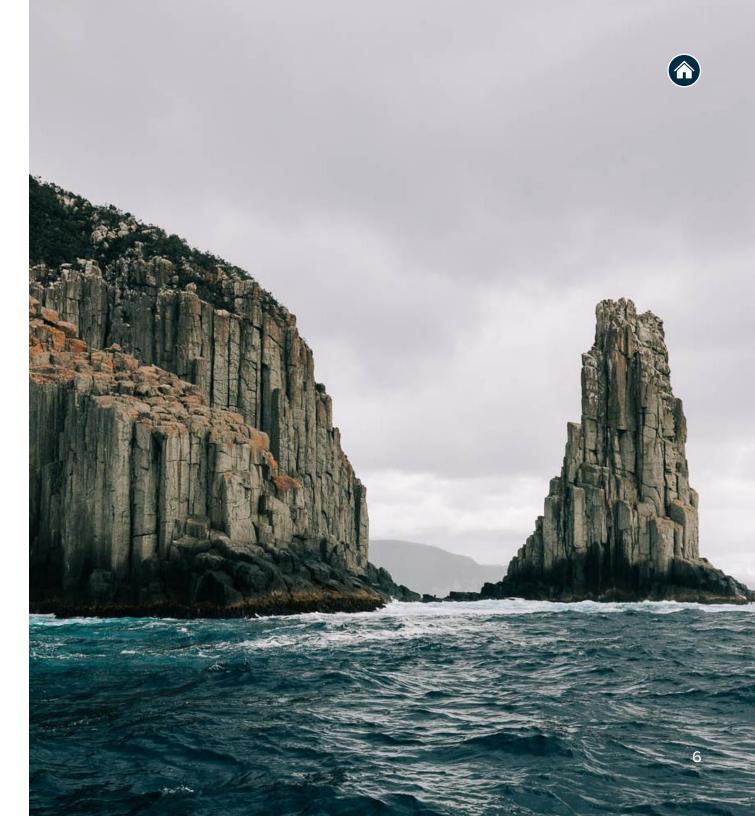

TRANSPARENCY

YETI will provide training and guidance for all requirements in this RSL Program. Suppliers are encouraged to request additional guidance if they need help understanding these requirements.

To ensure sustained compliance with applicable law, the Supplier Code of Conduct, and this RSL Program, YETI expects its suppliers to be transparent about their organization and management systems. Suppliers shall allow an authorized representative of YETI to assess the chemical management system and facility where YETI products or raw materials are developed, manufactured, or stored. YETI reserves the right to perform this periodic assessment during regular business hours.

DEFINITIONS

Allergen

A substance that induces an allergy. Common allergens include pollen, grasses, dust, and some medications.

Article (EU REACH)

An object which during production is given a special shape, surface or design which determines its function to a greater degree than its chemical composition.

Carcinogenic

A relationship has been established between exposure to the substance and human cancer by a competent authority.

Chemical Abstract Service Number (CAS No)

A unique number that identifies a specific chemical structure. This number is used to help identify chemical substances which have many different naming conventions.

Chemical Substance

A form of matter having homogeneous chemical composition and characteristic properties.

Component

Any part of an article or finished good; such as a button on an article of clothing, material of a soft cooler, or a drain plug on a hard cooler.

Endocrine Disrupter

Endocrine disruptors are natural or man-made chemicals that mimic or interfere with the body's hormones. These chemicals are linked to developmental, reproductive, brain, immune, and other problems.

Environmentally Persistent

Substances that resist natural processes of degradation through chemical, biological, and photolytic processes and stay in the environmental for many years. They are also referred to as "forever chemicals".

Extractable

Compounds which are extracted from a material under controlled conditions of solvent, temperature, pH, or another method.

Food Contact Article (FCA)

FCA is the finished good that is produced from the FCM. (e.g., bottle, cooler, or bucket)

Food Contact Materials (FCM)

Materials made with food contact substances. It is often a mixture, such as an antioxidant in a polymer. The composition may be variable.

Food Contact Substance (FCS)

A single substance, such as a polymer or an antioxidant. As a substance, it is reasonably pure. Even though a polymer may be composed of several monomers, it still has a well-defined composition.

Local Supplier

Material or Component suppliers chosen by a Finished Good supplier.

Method Detection Limit (MDL)

The minimum measured concentration of a substance that can be reported within 99% confidence that the measured concentration is distinguishable from the method blank results.

Migration

The transfer of substance from one media to another. Example: Food contact materials where substates transfer from the FCM into the food.

Mixture

A mix or solution of two or more substances which do not chemically react with each other (e.g., inks).

DEFINITIONS

Prohibited

A substance that is banned or forbidden. No substance can be detected above the specific method detection limit.

Practical Quantitation Limit (PQL)

The lowest level at which the method can confidently discern between two different values. Also known as the Detection Limit (DL).

Reporting Limit

Values at or above the method Practical Quantification Limit (PQL). The PQL represents the lowest level at which accurate, precise, and robust data can be reported.

Safety Data Sheet (SDS)

An SDS (formerly known as MSDS) includes information such as the properties of each chemical; the physical, health, and environmental health hazards; protective measures; and safety precautions for handling, storing, and transporting the chemical. An SDS should be prepared and provided for a substance or mixture meeting Global Harmonized Standard (GHS) classification criteria or for a mixture containing a hazardous substances. There may be a variation in the GHS version acceptable to a specific country.

Specific Migration Limit

A maximum permitted amount of a substance in food. This limit ensures that the food contact material does not pose a risk to health. Test media is assigned that simulates the transfer of substances from the plastic material into food. The resulting extract is analyzed using various analytical techniques to identify the presence of specific substances in the food simulating solvents.

Suspected Carcinogen

A relationship has been established between exposure to the substance and cancer in animals or if there is limited evidence of cancer in human and animals from exposure to the substance.

Sustainable Chemistry

The design, manufacturing and use of efficient, effective, safe and more environmentally benign chemical products and processes.

Finished Good Supplier

These suppliers are contracted directly through YETI to manufacture a finished good. These partners are responsible for ensuring compliance of all incoming materials and components that will be utilized within the finished good.

Component Supplier

These suppliers procure raw materials and are responsible for manufacturing a specific component of the finished good. It is important to note, Component suppliers can also be considered a Finished Good supplier.

Raw Material Supplier

These suppliers are the foundation of the supply chain. They supply raw, or close to raw materials like metal, plastics, cotton, synthetic materials, etc.

Toxicity

The degree to which a chemical substance or a particular mixture of substances can damage an organism. Toxicity can refer to the effect on a whole organism, such as an animal, bacterium, or plant, as well as the effect on a substructure of the organism, such as a cell (cytotoxicity) or an organ such as the liver (hepatotoxicity).

Traces

A nonspecific term for any material or substance found in minute, often barely detectable, amounts.

Volatile

A substance is considered volatile if it has a low boiling point at normal atmospheric pressure. Volatile chemicals (e.g., formaldehyde) can cross contaminate products because they can more easily vaporize and travel.

Usage Ban

Defined as a prohibition of intentional use of the substance during all stages of product manufacturing. However, the RSL may expressly allow a trace amount of the substance to be present as an unavoidable contaminant when the levels detected have been assessed and are within safe limits.

SUPPLIER RESPONSIBILITY

-Y. CAS

SUPPLIER RESPONSIBILITY

Chemical Hazards and Risk Management

Responsible chemical management is critical to consistent compliance and safety within the YETI supply chain. Suppliers must maintain safety and environmental programs, including documented procedures and training to protect workers and the environment from chemical exposure.

Suppliers shall possess all legally required and valid permits and certificates related to health, safety, and environmental issues, such as those related to the purchase and storage of chemicals, fire safety inspections, and inspection of machinery, wastewater, and (chemical) waste disposal.

All chemicals and hazardous substances shall be appropriately labeled and stored in secure and ventilated areas and disposed of safely and legally in accordance with applicable laws. Suppliers shall provide labels in the local language and the language spoken by workers if different from the local language. Workers shall receive training appropriate to their job responsibilities concerning the hazards, risks, and the safe use of chemicals and other hazardous substances.

Safety Data Sheet (SDS) for all chemicals and hazardous substances used in the workplace must be available at the usage and storage sites of the chemicals and hazardous substances in the local language and the language spoken by workers, if different from the local language. Workers shall have free access to up-to-date SDSs. In addition, we expect suppliers to implement and maintain a Chemical Inventory List (CIL), which includes all processing chemicals managed safely on-site.

Suppliers shall regularly review their management system and document all RSL Program and compliance testing failures.

Sustainable Chemistry

Suppliers are encouraged to collaborate with YETI and other industry experts to reduce the use of hazardous substances through the discovery of new sustainable chemicals and production processes. This includes sourcing from suppliers that follow sustainable chemistry principles and comply with the YETI RSL Program.

Improvements at any stage in the supply chain can help enhance the health of our communities and the environment while continuing to deliver products with best-in-class performance and durability.

SUPPLIER RESPONSIBILITY

General Supplier RSL Responsibilities

All suppliers must provide YETI with materials that meet the YETI RSL Program requirements through contractual obligation. All materials, including recycled materials, used to make YETI products should be tested in accordance with the RSL Program. Materials that fail to comply with the RSL Program are prohibited from being used in finished goods.

YETI Expectations:

- Suppliers shall become familiar with this document and certify that all raw materials, components, and finished goods manufactured for YETI meet or exceed the standards listed herein;
- Suppliers shall review the RSL Program annually;
- Suppliers shall comply with all applicable legal requirements, regardless of whether they are listed within this manual;
- Suppliers shall request clarification where a requirement or a standard appears unclear;
- Complete transparency from suppliers. YETI will work with suppliers to drive compliance and improvements;
- Suppliers are prohibited from altering preapproved materials. Any modification to material composition, including changes in local suppliers, must be approved by YETI;
- Suppliers shall use accredited 3rd party labs for all testing and certification processes. YETI's primary testing partners and contact information, can be found in the Testing Scheme section of this RSL Program;

Finished Good Supplier Responsibilities

Finished Good suppliers are responsible for standardizing an internal process to collect compliance information throughout their supply chain. YETI may be obligated to evaluate the presence of certain hazardous substances within products, components, or raw materials to report to regulatory bodies. YETI strives to ensure compliance with all qualified raw materials and components during new product development. The Finished Good supplier is responsible for the compliance of Local Suppliers.

In addition to General Supplier RSL Responsibilities, YETI expects:

- Finished Good Suppliers to certify all material compliance with this RSL Program no less than once per calendar year, or at YETI's reasonable request, regardless of where the raw materials or components are sourced;
- Finished Good Suppliers to inform all suppliers within their supply chain of the RSL Program, its expectations, restrictions, and annual updates, and verify its compliance;
- Finished Good Suppliers to communicate regulatory requirements to all suppliers within their supply chain and gather information on YETI's behalf for reporting purposes.
- Finished Good Suppliers to confirm acceptance of these terms by completing the attached Supplier RSL Acknowledgement.

Qualified Suppliers

When YETI qualifies a specific raw material or component to be used by a Finished Good Supplier, YETI will be responsible for validating compliance with these raw materials or components during the product development stage.

TRAINING

The RSL helps YETI and its partners comply with laws and safer chemistry initiatives, regulate their supply chains and implement responsible product stewardship. As such, RSL Training is mandatory and provided to all suppliers. This includes members of the supplier's product safety/compliance team, and anyone involved with making decisions related to purchasing new chemicals. It is required to review training materials with the release of each RSL Program update. It is an important part of YETI's new product onboarding process.

YETI RSL Training is available on the <u>Supplier Portal</u> hosted by UL. All trainings are performed in both English and Mandarin. The recordings and presentations can be found in the Portal for both languages. Please contact the YETI RSL Team at <u>rsl@yeti.com</u> for login information.

The following topics can be found in the Portal:

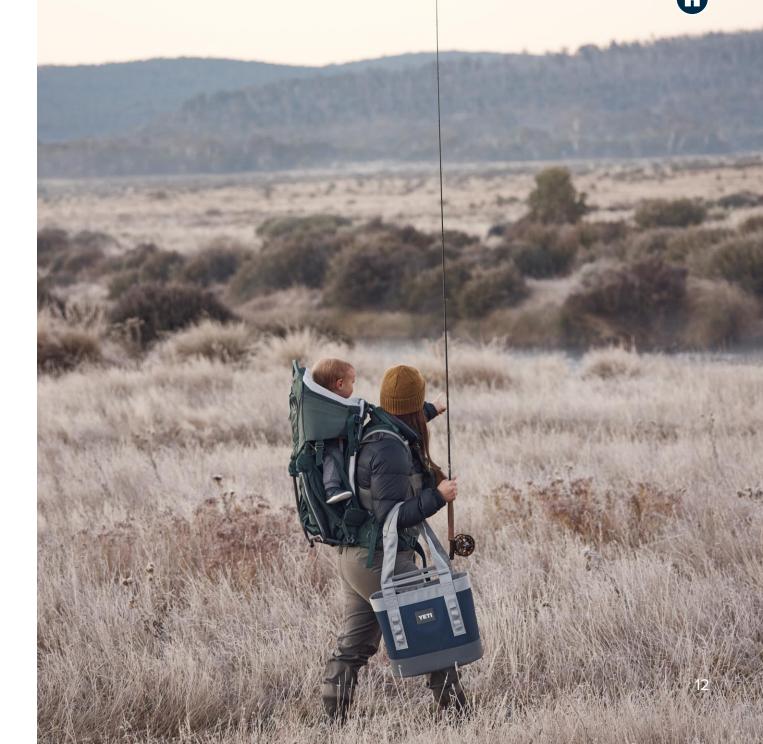

YETI Supplier RSL General Training (2021)

YETI Supplier Food Contact Material (FCM) Training (2021)

YETI Supplier RSL Updates Training (2022)

YETI Supplier PFAS Training (2022)

YETI Supplier RSL Updates Training (2023)

REGULATORY REQUIREMENTS

YETI

YETI

REGULATORY REQUIREMENTS

California Proposition 65

The State of California enacted the Safe Drinking Water and Toxic Enforcement Act of 1986, now referred to as California Proposition 65. The State is required to publish an annual list of chemicals known to cause cancer, birth defects, or other reproductive harm.

Businesses are required to inform Californians if their products contain chemicals listed on the Proposition 65 list above the significant risk level. Notifying consumers must be in the form of warning labels on the product. Website sales also require warnings of chemicals in products. Additional information can be found at: <u>https://oehha.ca.gov/proposition-65</u>.

A signed declaration, or disclosure on an SDS, is required by raw material, component and finished good suppliers if a substance from the California Proposition 65 list is present in any amount.

EU REACH Substances of Very High Concern (SVHC)

EU REACH is based on potentially hazardous chemicals to human health and the environment. It is up to the member states to propose substances for placement on the European Chemicals Agency (ECHA) "Candidate List of Substances of Very High Concern for Authorization." ECHA periodically updates the Candidate List. The most current version of this list can be found below: https://www.echa.europa.eu/candidate-list-table.

The identification of a substance as a SVHC and its inclusion in the Candidate List can trigger certain legal obligations for importers, producers and suppliers of an article that contains such a substance.

According to REACH, article examples include coolers, drinkware, bags, etc. Producers and importers of an article containing substances on the Candidate List must notify ECHA if both of the following conditions are met:

1. The substance is present in their article above a concentration of 0.1% weight by weight.

2. The substance is present in the articles in quantities totaling over one ton per year.

However, YETI will not register components that contain a SVHC greater than 0.1% weight by weight. Therefore, YETI expressly prohibits using any component or material that contains an SVHC at a level greater than 0.1% weight by weight. The raw material and/or component supplier is responsible for confirming compliance to REACH (SVHC) at their own cost and providing a signed declaration to YETI for a specific component and/or finished good.

Notification is not required when the producer or importer of an article can exclude exposure of humans and the environment during the use and disposal of the article. In such cases, the producer or importer must supply appropriate instructions to the recipient of the article.

EU REACH Annex XVII

The Annex XVII of the EU REACH regulation contains a list of restrictions of certain hazardous substances, mixtures and articles for their marketing and use on the European market. A restriction can apply to any substance on its own, in a mixture or in an article, including those that do not require registration. A list of substances that are restricted under the EU REACH and REACH Annex XVII can be found below: https://echa.europa.eu/substances-restricted-under-reach

A signed declaration is required by component and finished good suppliers.

Conflict Minerals

The US regulates conflict minerals under Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502 Conflict Minerals Statutory Provision. EU and member states regulate conflict minerals under EU Conflict Minerals Regulation (EU) 2017/821. Both US & EU define conflict minerals as tantalum, tin, tungsten, and gold (often referred to as 3TG) originated from Democratic Republic of the Congo and adjoining countries that may directly or indirectly benefited armed groups.

No materials, components, or products supplied to YETI may contain conflict minerals as identified by either of the above regulations. All suppliers of 3TG or materials and components containing 3TG are required to conduct due diligence as per the OECD guidance to trace the origin of these minerals and report on their findings to YETI.

Annex 1 of the EU Conflict Minerals Regulation provides more details of the minerals currently covered, with Combined Nomenclature codes and the import volume thresholds above which you are in scope of the EU Conflict Minerals Regulation.

REGULATORY REQUIREMENTS

Chemicals of High Concern to Children (CHCC)

In the United States, Maine, Oregon, Vermont and Washington have reporting laws that require manufacturers to report the presence and use of chemicals listed as CHCC in children's products for sale within these states. Intentionally added substances above the PQL level and contaminants above 100 ppm must be reported to each state.

Since each state has specific reporting requirements, please see additional details below:

Maine

Reporting to the State of Maine's Department of Environmental Protection can be found at: <u>http://www.maine.gov/dep/safechem/</u>.

Oregon

Reporting to the Oregon Health Authority (OHA) is required, even for inaccessible component parts. Additional information can be found at:

https://public.health.oregon.gov/HealthyEnvironments/HealthyNeighborhoods/ToxicSubstances/Pages/Toxic-Free-Kids.aspx.

Vermont

Reporting to Vermont's Department of Health is required, and additional information can be found at: http://www.healthvermont.gov/enviro/chemical/cdp.aspx.

Washington

The current list of chemicals is available through the State of Washington's Department of Ecology at: <u>https://ecology.wa.gov/Regulations-Permits/Reporting-requirements/Reporting-for-Childrens-Safe-Products-Act/Chemicals-of-high-concern-to-children</u>.

A signed declaration is required by finished good suppliers of children's products.

CARB & Montreal Protocol

The Montreal Protocol is a global agreement to protect the stratospheric ozone layer by phasing out the production and consumption of ozone-depleting substances (ODS).

This protocol provides global investment in alternative technologies to help repair the damaged ozone layer and focuses on phasing out the production and consumption of ODS such as chlorofluorocarbons (CFCs) and halons.

The full text of the Protocol, information on its institutions and past actions, and related publications are available through the UN Environment Montreal Protocol Ozone Secretariat website.

In addition to the Montreal Protocol, the State of California has a similar regulation referred to as CARB. Due to differences between Montreal Protocol and CARB, suppliers must review both the Montreal Protocol and CARB to ensure they comply with both regulations.

Additional information for the Montreal Protocol and CARB can be found below:

Montreal Protocol - https://ozone.unep.org/

CARB - https://ww2.arb.ca.gov/resources/fact-sheets/hydrofluorocarbon-hfc-prohibitions-california

A signed declaration is required by finished good suppliers of foamed products.

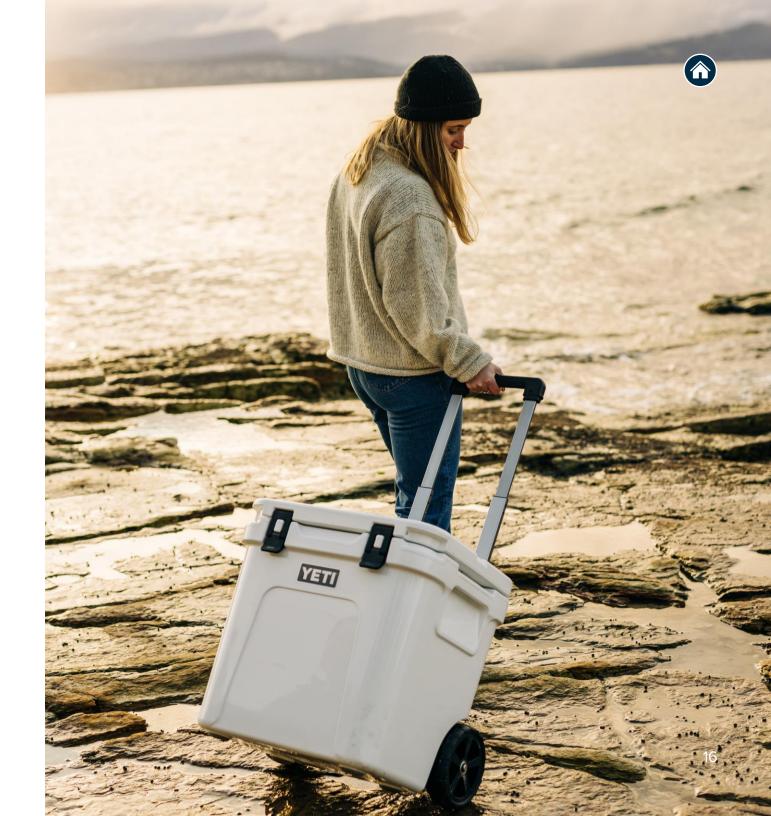

Poisonous and Deleterious Substances Control Law (Japan)

In accordance with the PDSCL, certain substances with hazardous properties are regulated and published by the Ministry of Health, Labor and Welfare (MHLW). These substances are divided into three categories: poisonous substances, deleterious substances and specified poisonous substances. When supplying materials to YETI that may contain any of the regulated substances as described by PDSCL, supplier must declare the Name, CAS number and concentration on the SDS according to GHS standards.

FOOD CONTACT REQUIREMENTS

Many YETI products are intended to be used to store or dispense food and beverages. Governments globally have enforced strict health and safety regulations that cover food contact materials (FCM) due to the possibility that substances used during the manufacture of these food contact products may migrate to food or beverage.

To ensure FCM compliance on products produced for YETI, it is crucial for suppliers to understand that all raw materials, colorants, processing aids, stabilizers, mold release agents, adhesives, etc., are compliant with the respective Food Contact regulations in each international market where YETI products will be distributed and used. This includes considering the type of food and the expected conditions of use. Food contact materials, and substances used within these materials, must meet the requirements of the General Product RSL and the Food Contact RSL.

FOOD CONTACT REQUIREMENTS

European Union

Regulation (EC) No 1935/2004

EU's framework regulation and sets out general requirements for all food contact materials (FCMs). FCMs shall not release their constituents into food at levels harmful to human health or change food composition, taste and odor in an unacceptable way.

Regulation (EC) No 2023/2006 on GMP

FCMs should be manufactured in compliance with general and detailed rules on good manufacturing practice (GMP). Business operators shall establish and implement both quality assurance system and quality control system and maintain documentation system.

Regulation (EU) No 10/2011

Specific measures required for Plastic Materials. Contains a positive list of authorized substances that can be used in the manufacture of the plastic layers of food contact plastic materials and articles (Annex I). The list covers monomers, starting substances, additives, and polymer production aids.

Regulation (EU) 2022/1616

Specific measures required for Recycled Plastic Materials.

Member State Regulations

For some types of food contact materials (i.e., rubbers, coatings, adhesives, and paper) for which there is no specific measures at EU level, a majority of EU Member States have set their own national provisions.

Japan

In Japan, the Ministry of Health, Labor, and Welfare (MHLW) has established specifications for various food contact materials and their raw materials.

Food Sanitation Act (Act No. 233 of 1947)

The Food Sanitation Act prohibits the sales of utensils and food container/packaging that contain any toxic or harmful substances.

Notification No. 196 of 2020 (amends MHLW Notification No. 370)

Establishes a Positive List for synthetic resins in food contact materials and articles by requiring these food contact materials and articles to be manufactured using substances in the Positive List

United States

In the United States, the overall regulatory status of a food contact material is dictated by the regulatory status of each substance that comprises the component. Substances that are reasonably expected to migrate from the food contact material because of its intended end use must be covered in the following:

21 CFR 174

General provisions applicable to indirect food additives

21 CFR 175-179

Positive list of substances used to manufacture certain types of food contact materials. When using substances on these lists, manufacturers must also comply with prescribed limitation(s).

21 CFR, 182-186

Generally Recognized As Safe (GRAS)

21 CFR 181

Prior Sanctioned Substances

21 CFR 170.39

Threshold of Regulation Exemption

Effective FCN

A Food Contact Substance Notification (FCN) is a notification for a new food contact substance or expanded use of an existing substance that must contain sufficient information to demonstrate that the substance is safe for the intended use. More information in the Appendix.

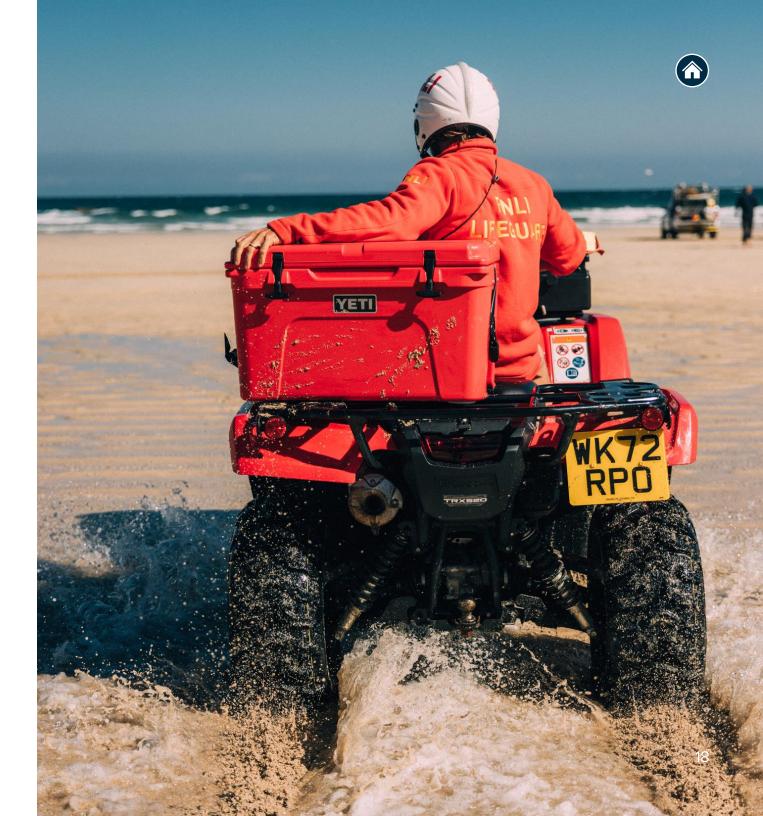

REGULATORY DECLARATIONS

This section outlines YETI's requirements associated with declarations. Suppliers can submit declarations in their own format for approval by YETI. Alternatively, they can obtain declaration templates from YETI by contacting RSL@yeti.com. New declarations are required when changes to formulations or materials occur. It is important to note that raw material, component, and finished goods suppliers will all be responsible for providing signed declaration(s) depending on the end use of the materials, components and finished goods being supplied.

Declarations YETI may request include, but are not limited to:

- Safety Data Sheets (SDS)²
- US (FDA) Food Contact Materials¹
- EU Food Contact Materials¹
- Japan Food Contact Materials¹
- EU Recycled Food Contact Plastics¹
- California Proposition 65
- EU REACH SVHC
- US State CHCC (Children's Products)
- CARB/Montreal Protocol (Foamed Products)
- Model Toxics in Packaging
- Persistent Organic Pollutants (POP)
- Azo Dyes
- BPA & Bisphenols
- PFAS
- Flame Retardants
- Others (as needed)

¹Any colorants, processing aids, stabilizers, mold release agents, adhesives, etc. added to raw material, components, and finished goods will need to be food safe. ²See the definitions page for more information.

SAFER CHEMISTRY

SAFER CHEMISTRY

Safer chemistry process at YETI aims to minimize the risks associated with chemicals in YETI products by replacing hazardous substances with safer alternatives, optimizing processes to reduce exposure, and promoting transparency and responsible chemical management. This involves a proactive approach to identify, assess, and implement safer chemicals and processes throughout a product's lifecycle. Suppliers are expected to regularly review these chemicals and collaborate with YETI to eliminate the identified chemical of concern from all YETI production within the communicated timeframe.

YETI prioritizes the identification, evaluation and elimination of hazardous chemicals and strives to replace them with safer alternatives. YETI may require the involvement of suppliers when determining these chemicals and the priority for their replacement.

The recommended guidance for suppliers includes:

- Identifying and Assessing Hazards: A comprehensive chemical inventory for materials as well as processes is a must for sound chemical management. Next step is to screen for hazards. Use robust scientific tools to identify chemicals of concern based on their known hazard classification and properties, such as those listed as PFAS, phthalates, Bisphenols etc.
- 2. Evaluation of Alternatives: Once hazards are identified, potential alternatives are assessed based on factors like:
 - Hazards: Are the alternatives less toxic or hazardous than the original substance?
 - Performance: Do the alternatives meet the required functionality technical and performance standards?
 - Life Cycle Impacts: Does the alternative have any unintended consequences throughout its lifecycle (e.g., manufacturing, use, disposal)
 - Based on the evaluation, the best alternative is selected, aiming to minimize risk and maximize benefits.

YETI

SAFER CHEMISTRY ACTION

PFAS

Per- and polyfluoroalkyl substances (PFAS) are a large class of chemicals containing carbon-fluorine bonds, one of the strongest chemical bonds known. PFAS have been widely used in the industry as they are chemically and thermally stable and highly resistant to degradation and oxidation. Many also have surfactant properties and functions that make them ideal as water and grease repellents. However, as science unfolds, it is now known that PFASs resist degradation and are highly persistent as they break down very slowly in the environment. Scientific studies have also linked high-level and prolonged exposure to some PFASs to potentially harmful health effects in humans and animals, and more research is ongoing to understand adverse health outcomes from exposure to PFAS. More information about PFAS can be found in the appendix.

In 2021, YETI and its suppliers successfully eliminated the use of all long chain PFAS from production in all product categories. These notably include PFOS, PFOS related substances, PFOA, PFOA salts, and PFOA related substances.

YETI has traced its supply chain, identified business areas where PFAS were present, and successfully implemented safe, suitable alternatives that will meet YETI's high-performance standards both where water repellency is required and where it is not. YETI remains committed to working above and beyond current global regulations and continues to explore PFAS-free materials in all applications, utilizing the latest technical innovations.

BPA & Bisphenols Derivatives

YETI goes above and beyond BPA regulations to ensure the safety of our consumers. All YETI Drinkware, including all lids, caps, and accessories, are free from BPA. This claim is validated by regular testing at independent accredited 3rd party labs. YETI conducts an incoming inspection for BPA on all raw materials used in the production of Drinkware including all lids, caps, and accessories. Additionally, all YETI Drinkware suppliers have all Drinkware components randomly sampled on a predetermined test cadence and sent to an independent 3rd party test lab for verification. All production of YETI drinkware as well as products in other food and Beverage category is gated to a passing BPA result from an accredited 3rd party Laboratory.

In 2022, all YETI products and materials which may come in contact with food or beverages were reviewed and tested at independent 3rd party labs to ensure they are free of all other bisphenol substances of concern, including BPS and BPF. This is to confirm there are no regrettable substitutions made.

PVC

YETI has taken the initiative to eliminate Polyvinyl Chloride (PVC) from its products due to worker wellbeing and environmental concerns including the release of toxic chlorinated dioxins during raw material and endof-live processing. Released toxic chemicals are bio accumulative, persistent, and harmful to both worker health and environmental health. The removal of PVC can be challenging because cost competitive and safer alternatives are not always commercially available at scale. However, through partnership and deep collaboration with our suppliers, we are transitioning away from PVC and to high performing alternatives that ensure safe raw material production and end of life processing.

YETI achieved its goal to eliminate PVC from all production in 2025.

RESTRICTED SUBSTANCE LISTS & GUIDANCE

RESTRICTED SUBSTANCE LISTS & GUIDANCE

The following table identifies YETI product categories by intended end use. General products, Food Contact products, and Packaging have different requirements which are determined by material composition.

Food contact substances must meet the requirements of both the General Product RSL and the Food Contact RSL.

| General Products | Food Contact Product | Packaging |
|------------------|-------------------------------|--------------|
| Backpacks/Bags | Hard Coolers | Labels |
| Can Insulators | Soft Coolers | Packaging |
| Cargo Box | Lunch Bags/Boxes | Hang Tags |
| Camp Chair | Drinkware (Tumblers, Bottles, | Label Insert |
| Blanket | Mugs, etc.) | Sticker |
| Apparel | Pet Bowls | |
| Pet Beds | Cookware | |
| Bottle Sling | Buckets | |
| Handbags | | |
| Hats | | |
| Patches | | |
| Luggage | | |

RSL Product Category Guidance

RESTRICTED SUBSTANCE LISTS & GUIDANCE

Examples of materials in scope of the YETI General & Food Contact Product RSLs

The tables below provide examples of materials within each category but are not all-inclusive. If you are unsure what category your material falls under, please contact RSL@YETI.com. Recycled or bio-based version of the below materials are also in scope of this RSL and may have additional requirements. It is important to ensure the correct category is identified as this determines what tests should be conducted to validate compliance to the YETI RSL Program.

| Natural Fibers | Synthetic Fibers | Blended Fibers | Synthetic Coated Fibers | Natural Leather & Fur | Natural Materials | Other M | laterials |

MATERIAL DEFINITIONS

Natural fibers. Animal or vegetable fibers (including semi-synthetics).

Blended Fibers

Woven or knitted materials created by blending two or more fiber types. A blended fiber consists of a natural and a synthetic fiber.

Synthetic Fibers

Human-made fibers based on synthetic chemicals (often from petroleum sources) such as polymers and extruded fibers.

Synthetic Coated Fibers

Leather-like materials - composed of a textile backing and, typically, a PU or PVC coating. May be referred to as artificial, imitation, vegan, or synthetic leather, or pleather.

Natural Leather

Created by tanning animal rawhides.

Coating

A fluid, semi-fluid, or other material, with or without a suspension of finely divided coloring matter, which changes to a solid film when a thin layer is applied to a metal, wood, stone, paper, leather, cloth, plastic, or other surface. **Coatings do not include printing inks or materials that become a part of the substrate**, such as the pigment in a plastic article or materials that bonded to the substrate, such as by electroplating or ceramic glazing. See "synthetic coated fabrics" for leatherlike materials where the coating becomes a substrate.

Printing

The process of applying color to a substrate in definite patterns or designs.

Natural Materials

Material derived from animals or plants that have undergone very little modification. Includes horn, bone, cork, wood, paper, and straw. Excludes natural fibers, natural leather, feathers, down, and metals.

Natural Rubber

Elastic material made from latex sap or trees that can be vulcanized.

Crystal

Crystal typically contains at least 24% lead and is therefore exempt from many regulatory requirements. In the EU, labeling of crystal products is regulated by Council Directive 69/493/EEC, which defines four categories based on the chemical composition and properties of the material.

Aqueous or Semi-Aqueous Material

Any liquid or semi-liquid materials. Examples include balm, wax, PCM (phase change material).

Polymers & Plastics

Plastics are composed of various polymers (typically from petroleum sources) usually mixed with additives including colorants, plasticizers, stabilizers, and fillers. These additives affect the chemical composition, chemical properties, and mechanical properties of the plastic.

Synthetic Rubber

Petroleum-based monomers with properties similar to natural rubber.

Foam

Spongy material made by trapping air bubbles in a solid. These can be open cell or closed cell.

Metals & Alloys

Chemical elements that can be lustrous, ductile, malleable, and good conductors of heat and electricity. Includes metals deposited by physical vapor deposition (PVD), chemical vapor deposition (CVD), or electroplating. Includes alloys (e.g., steel, solder, etc.).

Glue & Adhesives

A substance capable of holding materials together by surface attachment.

General Products: Material Risk & Testing Matrix

The table below outlines the risk associated with chemicals commonly found in specific material types. The matrix table separates out certain polymer types from the general category noted in the YETI materials table. This has been done as various substances are associated with various types of polymers/plastics. The table also outlines which testing is required and recommended for each material type.

High Risk

Moderate Risk

Core Testing
 O
 Recommended Testing

Low Risk

¹ Specific to dyed and/or colored material

² Specific to material where flame retardants are applied

³ Specific to wood, paper and straw

⁴ Specific to Wool

 $^5\,\text{Required}$ when the results obtained from extractable chromium are greater than 1 mg/kg

⁶ Specific to plant-based fibers only

⁷ Specific to PVC materials

⁸ Specific to SBR (styrene butadiene rubbers) and Polystyrene polymers only

⁹ Specific to materials where PFAS are intentionally added or contamination is suspected.

¹⁰ Specific to rubber or black polymeric materials

¹¹ Specific to polyurethane-based material

¹² Applies to accessible and inaccessible components when a Bisphenol free claim is made on the product.

¹³ Specific to Children's products

¹⁴ Test on PCP only

RESTRICTED SUBSTANCE LISTS & GUIDANCE: FOOD CONTACT PRODUCTS

Food Contact Products: Material Risk & Testing Matrix

Core Testing

The Food Contact Material Risk Matrix outlines the risk associated with chemicals commonly found in specific material types which will come into direct and indirect contact with food. Suppliers should utilize this matrix to support their understanding of what chemicals are of highest concern based on the material type being supplied to YETI. Food contact materials must meet the requirements of both the General Product RSL and the Food Contact RSL. The table also outlines which testing is required or recommended for each material type.

| Substance | Ceramics | Glass | Metal | Plastics | Rubbers | Silicone |
|-----------------------------------|----------|-------|-------|----------|---------|----------|
| Specific Migration of BPA | | | | •1 | | |
| Bisphenols (BPA, BPF, BPS) | | | | •5 | •5 | •5 |
| Formaldehyde | | | | •2 | | |
| Heavy metals, Extractable | ●3 | •3 | • | • | • | • |
| Heavy metals, Total | 0 | 0 | 0 | • | 0 | • |
| Monomers | | | | •4 | | • |
| N-nitrosamines | | | | | • | |
| Phthalates | | | | • | 0 | |
| Polycyclic Aromatic Amines (PAA) | | | | • | 0 | • |
| PVC | | | | • | • | |
| Volatile Organic Substances (VOC) | | | | • | • | • |

Recommended Testing

¹Specific to Polycarbonates and specific resinous coatings ² Specific to Melamine Formaldehyde articles ³ Specific to glaze ceramicware, decorations found in the lip and rim area and externally decorated ceramicware and glassware ⁴ Monomers are specific based on the plastic identification; example styrene monomer found in polystyrene ⁵ Applies to accessible and inaccessible components

RESTRICTED SUBSTANCE LISTS & GUIDANCE: PACKAGING

Examples of materials in scope of the YETI Packaging RSL

The list below provides examples of packaging materials within each category but is not all-inclusive. If you are unsure what category your material falls under, please contact YETI or the lab for clarification. It is important to ensure the correct category is identified as this determines what tests should be conducted to provide a final declaration stating compliance to YETI Packaging RSL.

| Paper & Wood | Plastic & Wrap | Finishing, Dyes | , Inks & Coatings | Metal | Textiles | Other Items |
|---|--|--|---|--|---|---|

RESTRICTED SUBSTANCE LISTS & GUIDANCE

Packaging: Material Risk & Testing Matrix

The Packaging Risk Matrix outlines the risk associated with chemicals commonly found in specific material types. YETI defines packaging as any product made to be used for the containment, protection, handling, delivery, and presentation of goods, from raw materials to processed goods or from the producer to the user or the consumer. Packaging is not restricted to any material type. The table also outlines which testing is required or recommended for each material type.

| | riigh lisk for fouris |
|---|--|
| | ² High risk for thermal receipt paper and recycled paper |
| : | ³ Moderate risk for tape, polycarbonate and recycled plastic |
| | ⁴ Moderate risk for poly bags |
| | ⁵ Moderate risk for silica gel packets and foam packaging |
| | ⁷ Specific to PVC materials |
| | ⁸ Specific to materials where a fluorinated finish is applied |
| | ⁹ Specific to rubber or black polymeric materials |

¹ High risk for foams

RESTRICTED SUBSTANCE LIST: PACKAGING

| All Substances for Packaging RSL | | | | | |
|----------------------------------|--|---------------|---|--|---|
| CAS No. | Substance Name | Restriction | Potential Uses | Test Method | Reporting Limit |
| Various | Alkylphenol (AP) and Alkylphenol Ethoxylates (APEOs), including all isomers | Total 100 ppm | APEOS are used as surfactants in the production of plastics, elastomers, paper, and textiles. These chemicals can be found in many processes involving foaming, emulsification, solubilization, or dispersion. APEOs can be used in paper pulping, lubrication oils, and plastic polymer stabilization. APs are used as intermediaries in the manufacture of APEOs and antioxidants used to protect or stabilize polymers. Biodegradation of APEOs into APs is the main source of APs in the environment. | NP & OP Textiles: EN ISO 21084:2019 Polymers and all other materials: 1 g sample/20 mL THF, sonication for 60 minutes at 70°C, analysis according to EN ISO 21084:2019 NPEO & OPEO All materials EN ISO 18254-1:2016 with determination of APEO using LC/MS or LC/MS/MS | Sum of NP & OP: 3 ppm Sum of NPEO & OPEO: 20 ppm |
| Various | Azo-amines and Arylamines | 20 ppm each | Azo dyes and pigments are colorants that incorporate one or several azo groups (- N=N-) bound with aromatic compounds. | All materials: EN ISO 14362-1:2017 p-Aminoazobenzene: All materials: EN ISO 14362-3:2017 | 5 ppm each |
| 128-37-0 | Dibutylhydroxytoluene (BHT) | 25 ppm | Used as an antioxidant in plastics to prevent aging. Can cause phenolic yellowing in textiles. | ASTM D4275 | 5 ppm |
| 80-05-7 | Bisphenol A | 1 ppm | Used in the production of epoxy resins, polycarbonate plastics, flame retardants, and PVC. It is often used as a coating in thermal receipt paper as a developer. | Extraction: 1 g sample/20 ml THF, sonication for 60 minutes at 60 degrees C, analysis with LC/MS | 0.1 ppm |
| 50-00-0 | Formaldehyde | 150 ppm | Formaldehyde can be found in polymeric resins, binders, and fixing agents for dyes and pigments, including those with fluorescent effects. It is also used as a catalyst in certain printing, adhesives, and heat transfers. Formaldehyde can be used in antimicrobial applications for odor control. Formaldehyde found in packaging can off- gas directly onto product. Composite wood materials (e.g., particle board and plywood) must comply with California and U.S. formaldehyde emission requirements (40 CFR 770). | Wood: EN 717-3 Paper: EN 645 and EN 1541 Finishing's, Dyes, Inks & Coatings: JIS L 1041-2011 A (Japan Law 112) or EN ISO 14184-1:2011 Textiles: JIS L 1041-2011 A (Japan Law 112) or EN ISO 14184-1:2011 Alternatively, GB/T 2912.1 | 16 ppm |

RESTRICTED SUBSTANCE LIST: PACKAGING

| All Substan | All Substances for Packaging RSL | | | | | |
|-------------|---|---|--|--|---|--|
| CAS No. | Substance Name | Restriction | Potential Uses | Test Method | Reporting Limit | |
| 7440-43-9 | Cadmium | | | All materials: Total heavy metals (Cd, | 1 ppm | |
| 7439-92-1 | Lead | | Used in colorants, pigments, in inks, paints, plastics. Found in metals, leathers, glass, ceramic etc. | Cr, Pb & Hg): EN ISO 16711-1 If total of four heavy metals exceeds | 10 ppm | |
| 7439-97-6 | Mercury | Total Sum ≤100 mg/kg | | 100 ppm and Cr is detected, test for CrVI | 5 ppm | |
| 18540-29-9 | Chromium (VI) | | | Metal: IEC 62321-7-1:2015 All other materials: IEC 62321-7- 2:2015 | 3 ppm | |
| Various | Organotin | 1 ppm each DBT, DOT, MBT, TCyHT, TMT, TOT and TPT 0.5 ppm each TBT and TPhT | Organotins are predominantly found in the environment as antifoulants in marine paints, but they can also be used as biocides (e.g., antibacterials), catalysts in plastic and glue production, and heat stabilizers in plastics/rubber. In textiles and apparel packaging, organotins are associated with plastics/ rubber, inks, paints, metallic glitter, polyurethane products and heat transfer material. | CEN ISO/TS 16179:2012 | 0.1 ppm each | |
| 9002-86-2 | PVC | Prohibited | Used in soft and clam shell packaging. | FTIR | NA | |
| 624-49-7 | Dimethyl Fumarate | Prohibited (< 0.1 mg/kg) | Used as an anti-mold agent that may be used in sachets in packaging to prevent the buildup of mold, especially during shipping. | ISO 16186:2021 | 0.05 ppm | |
| Various | Phthalates* | ≤100 mg/kg | Used to soften plastics, also found in paints. | All materials: CPSC-CH-C1001-09.4, analysis by GC/MS | 50 ppm each | |
| Various | PFOS, PFOS related substances, PFOA, PFOA salts, PFOA related substances | None Detected | Used in coatings as a resistance to water, oil and stain repellent. | All Materials: EN ISO 23702-1 | 1 μg/m2 each or 100 ppb total depending on PFAS | |
| Various | PFAS (TOF) | 100 ppm | | EN 14582:2023 or ASTM D7359:2023 | 20 ppm | |

*A full list of restricted phthalates can be found in the Appendix.

TESTING SCHEME

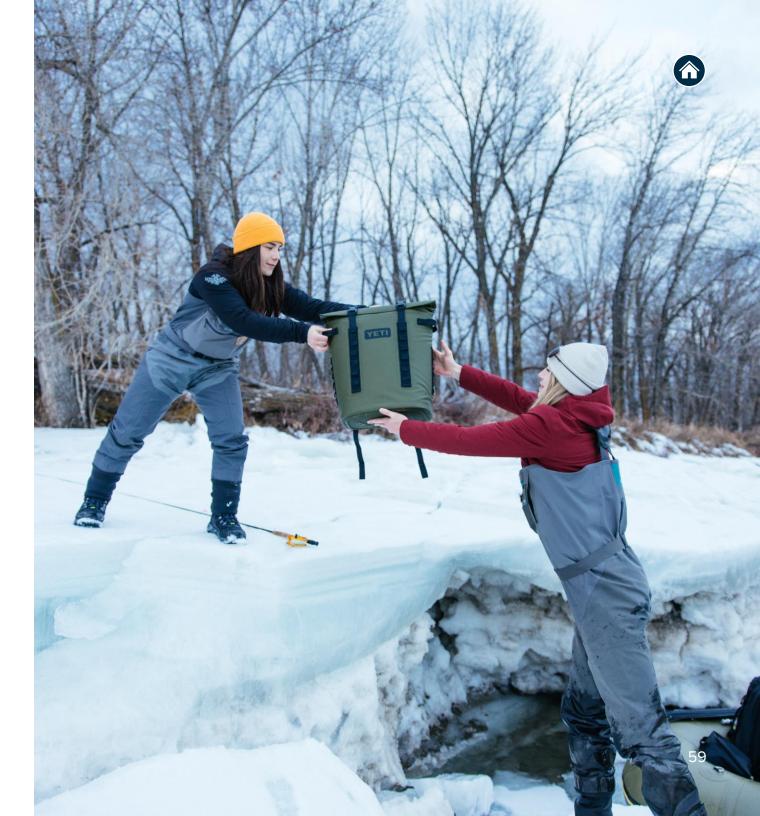

TESTING SCHEME

Suppliers are responsible for ensuring the initial and ongoing compliance of materials being supplied to YETI. It is the supplier's responsibility to ensure compliance to applicable laws, the YETI RSL Program, and all other legally binding compliance requirements.

YETI requires all Finished Good suppliers to conduct an annual RSL Program review on materials supplied to YETI to validate continued compliance at the material state. Finished Good suppliers will be responsible for annually certifying the ongoing compliance of all materials being used to manufacture YETI products, regardless of where the raw material or components are sourced. Finished Good Suppliers must inform sub-suppliers of the RSL Program requirements to verify compliance. All Finished Good suppliers are required to certify material compliance with this RSL Program no less than once per calendar year or at YETI's reasonable request.

YETI highly encourages all material, component, and finished good suppliers to conduct applicable compliance testing by referencing the Material Testing Matrices within this document to confirm compliance to the YETI RSL Program. This testing can be conducted at any accredited 3rd party test lab globally. YETI's UL and Intertek partners are listed on the following pages.

YETI reserves the right to randomly test materials, components and/or finished goods in any stage of production. The purpose of random testing is to validate consistency of RSL Program compliance.

YETI SUPPLIER COMPLIANCE ACKNOWLEDGEMENT

YETI

YETI SUPPLIER COMPLIANCE ACKNOWLEDGEMENT

By signing this document, the Supplier acknowledges that complying with by YETI's Restricted Substance List Program (RSL) is an essential aspect of doing business with YETI. Every supplier is required to become familiar with this document, analyze the requirements and certify that all raw materials, components, articles and products manufactured for YETI meet or exceed the standards listed within the RSL.

- We have received, read, and fully understand YETI's RSL requirements, including that all necessary declarations are signed and compliance to food positive lists is understood, as originally published in 2021 and amended annually;
- We agree to not engage in altering preapproved materials. Any modification to material composition, including changes in local suppliers, must be approved by YETI and meet all applicable RSL requirements;
- Compliance with the RSL is a condition of each order placed by YETI. Each shipment confirms that all materials, parts, chemicals and other goods shipped by us fully comply with the RSL;
- YETI reserves the right to randomly test materials, components and/or finished goods in any stage of production to validate RSL compliance;
- We agree to keep all RSL related information regarding all substances used in manufacturing YETI's orders available for at least seven (7) years from the date of delivery to YETI;
- Supplier acknowledges that any failure by Supplier or any of its officers, directors, managers, supervisors, or other employees or workers, or any of Supplier's sub-suppliers or other subcontractors, to comply with the RSL, may have a severe adverse impact upon Supplier's relationship with YETI and may also be considered a breach of contract between the parties.

APPENDICES

WATE

APPENDIX A - US FDA FOOD CONTACT NOTIFICATION (FCN) PROGRAM

In addition to the food positive list many food contact substances are approved through the FDA's Food Contact Notification Program (FCN).

- The FCN is specific to the manufacturer who has received approval.
- It is also specific to the approved applications.
- Manufacturers of finished products must have documentation tracing the substances used to the manufacturer listed in the applicable FCN.

An example of an FCN can be found below.

What does this FCN tell us?

- This FCN is specific to Eastman Chemical Company and will only apply to their product.
- If a manufacturer is producing the same product, they must apply for their own FCN.
- This material can be used as a component of repeated use food contact

article for all food types at temperatures up to and including 100°C.

If you are not purchasing directly from the manufacturer noted on the FCN, a declaration from your supplier guaranteeing they are using only the material applicable to this FCN will be required by YETI.

An example of the letter is to the right:

FCN No. 1041 Eastman Chemical Company

According to Section 409(h)(1)(C) of the Federal Food, Drug, and Cosmetic Act, food contact substance notifications (FCNs) are effective only for the listed manufacturer and its Other manufacturers must submit their own FCN for the same food contact substance and intended use

| Food Contact Substance: | Polymer of dimethyl terephthalate, 1,4-cyclohexanedimethanol, and 2,2,4,4-tetramethyl-1,3- cyclobutanediol (CAS Reg. No. 261716-94-3) containing repeat units consisting of terephthalate esters of 2,2,4,4-tetramethyl-1,3-cyclobutanediol at up to 40 mole percent (expressed as mole percent of the glycol component of the finished copolyesters) and 1,4- cyclohexanedimethanol at no less than 60 mole percent, and, optionally, ≤0.5 percent (by weight of the finished resin) trimellitic anhydride (CAS Reg. No. 552-30-7) as a branching agent. REPLACES FCN 729 |
|---|---|
| Notifier: | Eastman Chemical Company |
| Manufacturer/Supplier: | Eastman Chemical Company |
| Intended Use: | The FCS will be used as a component of repeat-use food-contact articles. |
| Limitations/Specifications*: | The FCS may be used in contact with all food types at temperatures up to and including 100°C. |
| Effective Date: | Apr 9, 2011 |
| National Environmental Policy Act (NEPA)** Submission: FDA Decision: | Categorical Exclusion 25.32(i) Categorical Exclusion Memo |

Dear whom it may concern,

This letter will serve as your notification that [insert supplier] will guarantee the use of Eastman Tritan[™] Copolyester TX1001 in manufacturing [insert product].

If further information is needed, please contact me at [insert supplier contact].

Sincerely, [insert supplier name]

APPENDIX B - LIST OF FLUORINATED GREENHOUSE GASES

| Fluorinated Greenhouse Gases | | | | | |
|------------------------------|---------------------------------------|--|--|--|--|
| CAS No. | Substance | CAS No. | Substance | | |
| 2551-62-4 | Sulfur hexafluoride – SF ₆ | 431-63-0 | HFC-236ea | | |
| 75-46-7 | HFC-23 – CHF ₃ | 690-39-1 | HFC-236fa | | |
| 75-10-5 | HFC-32 | 679-86-7 | HFC-245ca | | |
| 593-53-3 | HFC-41 | 460-73-1 | HFC-245fa | | |

| 354-33-6 | HFC-125 | 75-73-0 | Perfluoromethane | | |
| 359-35-3 | HFC-134 | 76-16-4 | Perfluoroethane | | |
| 811-97-2 | HFC-134a | 76-19-7 | Perfluoropropane | | |
| 75-37-6 | HFC-152a | 355-25-9 | Perfluorobutane | | |
| 430-66-0 | HFC-143 | 678-26-2 | Perfluoropentane | | |
| 420-46-2 | HFC-143a | 355-42-0 | Perfluorohexane | | |
| 431-89-0 | HFC-227ea | 115-25-3 | Perfluorocyclobutane | | |
| 677-56-5 | HFC-236cb | 4901-51-3, 58-90-2, 935-95-5, and others | Tetrachlorphenols (TeCP) and their salts, and tetrachlorophenoxy compounds | | |

APPENDIX C - PER & POLYFLUORINATED CHEMICALS (PFAS) RESOURCES

OECD

The Organization for Economic Co-operation and Development (OECD) is an intergovernmental organization in which representatives of 38 industrialized countries in North and South America, Europe and the Asia and Pacific region, as well as the European Commission, meet to co-ordinate and harmonize policies, discuss issues of mutual concern, and work together to respond to international problems.

The OECD defines PFAS as fluorinated substances that contain at least one fully fluorinated methyl or methylene carbon atom (without any H/Cl/Br/l atom attached to it), i.e., with a few noted exceptions, any chemical with at least a perfluorinated methyl group (–CF3) or a perfluorinated methylene group (–CF2–) is a PFAS.

A link to the OECD's Portal on Per and Poly Fluorinated Chemicals can be found below: https://www.oecd.org/chemicalsafety/portal-perfluorinated-chemicals/

A link to the OECD's report "Reconciling Terminology of the Universe of Per- and Polyfluoroalkyl Substances: Recommendations and Practical Guidance" can be found below. The report summarizes recent efforts by the OECD/UNEP Global PFC Group between June 2018 and March 2021 in reviewing the universe and terminology of per- and polyfluoroalkyl substances (PFAS) to provide recommendations and practical guidance to all stakeholders regarding the terminology of PFAS.

https://www.oecd.org/chemicalsafety/portal-perfluorinated-chemicals/terminology-per-and-polyfluoroalkyl-substances.pdf

EPA

The Environmental Protection Agency (EPA) is committed to providing meaningful, understandable, and actionable information on per- and polyfluoroalkyl substances – known as PFAS – to the American public. The information provided here is intended to explain some of the important background information needed to understand the details of specific actions EPA takes to address PFAS, and other emerging events related to PFAS.

A link to the EPA's PFAS home page can be found below: <u>https://www.epa.gov/pfas</u>

ECHA

The European Chemicals Agency (ECHA) is an EU agency that implements the EU's chemicals legislation to protect health and the environment. Their work also contributes to a well-functioning internal market, innovation and the competitiveness of Europe's chemicals industry.

A link to ECHA's information on PFAS can be found below: <u>https://echa.europa.eu/hot-topics/perfluoroalkyl-chemicals-pfas</u>

AFIRM

The Apparel and Footwear International RSL Management (AFIRM) Group is a membership organization of apparel and footwear companies collaborating to promote chemicals management in the global supply chain.

A link for the AFIRM RSL can be found below: https://www.afirm-group.com/

APPENDIX D - LISTS OF PESTICIDES

United States EPA

A pesticide is any substance or mixture of substances intended for

- Preventing, destroying, repelling or mitigating any pest.
- Use as a plant regulator, defoliant, or desiccant.
- Use as a nitrogen stabilizer

More information you can find on EPA website link as below:

https://www.epa.gov/ingredients-used-pesticide-products/basic-information-about-pesticideingredients

https://www.epa.gov/ingredients-used-pesticide-products/brief-overviews-about-individual-pesticides

EU Pesticides Database

The EU Pesticides Database allows users to search for information on active substances used in plant protection products, Maximum Residue Levels (MRLs) in food products, and emergency authorisations of plant protection products in Member States.

The database contains information on active substances (including those that are low-risk or candidates for substitution) and basic substances, either approved or non-approved in the EU. Some safeners and synergists are also listed but these have not yet been assessed at EU level.

More information you can find on EU pesticides Database as the link below: <u>https://food.ec.europa.eu/plants/pesticides/eu-pesticides-database_en</u>

APPENDIX E - PHTHALATES RESTRICTED IN PACKAGING

| Phthalates R | Phthalates Restricted in Packaging | | | | | |
|--------------|--|--|------------------------|--|-----------------|--|
| CAS No. | Substance Name | Restriction | Potential Uses | Test Method | Reporting Limit | |
| 28553-12-0 | Di-Iso-nonylphthalate (DINP) | | | | | |
| 117-84-0 | Di-n-octylphthalate (DNOP) | | | | | |
| 117-81-7 | 7 Di(2-ethylhexyl)-phthalate (DEHP) | | | | | |
| 26761-40-0 | Diisodecylphthalate (DIDP) | | | | | |
| 85-68-7 | Butylbenzylphthalate (BBP) | | | | | |
| 84-74-2 | Dibutylphthalate (DBP) | | | | | |
| 84-69-5 | Diisobutylphthalate (DIBP) | Esters of ortho-phthalic acid (Phthalates) are a class of organic compound commonly added to plastics to increase flexibility. They are sometimes used to facilitate the moulding of plastic by decreasing its melting temperature. 500 ppm each Total: 1000 ppm Phthalates can be found in: • Flexible plastic packaging | | | | |
| 84-75-3 | Di-n-hexylphthalate (DnHP) | | | | | |
| 84-66-2 | Diethylphthalate (DEP) | | | | | |
| 131-11-3 | Dimethylphthalate (DMP) | | | | | |
| 131-18-0 | Di-n-pentyl phthalate (DPENP) | | | | 50 ppm each | |
| 84-61-7 | Dicyclohexyl phthalate (DCHP) | | | All materials: | | |
| 71888-89-6 | 1,2-Benzenedicarboxylic acid, di-C6-8-branched alkyl esters, C7-rich | | | CPSC-CH-C1001-09.4, analysis by GC/MS | | |
| 117-82-8 | Bis(2-methoxyethyl) phthalate | | | | | |
| 605-50-5 | Diisopentyl phthalate (DIPP) | | Components (e.g., PVC) | | | |
| 131-16-8 | Dipropyl phthalate (DPRP) | | Plastisol print pastes | | | |
| 27554-26-3 | Diisooctyl phthalate (DIOP) | | Adhesives | | | |
| 68515-50-4 | Diisohexyl phthalate, branched and linear (DHxP) | Plastic sleeves | | | | |
| 71850-09-4 | Diisohexyl phthalate (DIHxP) | | Polymeric coatings | | | |
| 68515-42-4 | 1,2-Benzenedicarboxylic acid, di-C7-11-branched and linear alkyl esters (DHNUP) | | | | | |
| 84777-06-0 | 1,2-Benzenedicarboxylic acid Dipentyl ester, branched and linear | | | | | |
| 68648-93-1 | 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters or mixed decyl and hexyl and octyl diesters | | | | | |
| | with \geq 0.3% of dihexyl phthalate; 1,2-Benzenedicarboxylic acid, mixed decyl and hexyl and octyl | | | | | |
| 68515-51-5 | diesters; 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters | | | | | |
| 776297-69-9 | n-Pentyl-isopentylphthalate (nPIPP) | | | | | |

APPENDIX F - ADDITIONAL VOCs

| Volatile Org | Volatile Organic Compounds | | | | | |
|--------------|--|----------------|----------------|---|-----------------|--|
| CAS No. | Substance Name | Restriction | Potential Uses | Test Method | Reporting Limit | |
| 96-18-4 | 1,2,3-Trichloropropane | | | For general VOC screening: GC/MS headspace 45 minutes at 120 degrees C | 100 ppm each | |
| 78-87-5 | 1,2-Dichloropropane | | | | | |
| 111-15-9 | 2-Ethoxyethyl acetate | | | | | |
| 149-57-5 | 2-Ethylhexane acid | | | | | |
| 62-53-3 | Aniline | Total: 500 ppm | | | | |
| 111-96-6 | Bis(2-methoxyethyl)ether | | | | | |
| 78-59-1 | Isophorone | | | | | |
| 108-95-2 | Phenol | | | | | |
| 109-99-9 | THF | | | | | |
| 106-94-5 | 1-Bromopropane | | | | | |
| 70657-70-4 | PG2MEA (1-Propanol, 2-methoxy-, acetate) | | | | | |
| 111-77-3 | (Methoxyethoxy)ethanol | | | | | |
| 584-84-9 | Toluene diisocyanate | | | | | |
| 110-80-5 | Ethoxyethanol | | | | | |
| 109-86-4 | Methoxyethanol EGME (Ethylene glycol monomethyl ether) | | | | | |
| 1589-47-5 | Methyloxypropanol | - | | | | |
| 110-71-4 | EGDME (Ethylene glycol dimethyl ether) | | | | | |
| 110-49-6 | EGMEA (Ethylene glycol monomethyl ether acetate) | | | | | |
| 67-72-1 | Hexachloroethane | | | | | |
| 75-09-2 | Methylene chloride (Dichloromethane) | | | | | |
| 110-54-3 | n-Hexane | | | | | |
| 112-49-2 | TEGDME (Triethylene glycol dimethyl ether) | | | | | |
